(a)
Vegard line, Tersoff at 0 K
lattice constant (Å)
Ge fraction x
(b)
crystal
near-melting probe
amorphous probe
split threshold
bond-angle spread (°)
temperature (K)
T (K)
(c)
harmful (valid anomaly)
v1, detected
v2, detected
fraction of 50 trials
composition swap
species swap
T label offset
premelting rows
amorphous rows
biased batch
unit slip
duplicate batch
local valid anomaly
